

This brochure is part of your Designing a Mining Town for the Moon project. Your entire group needs to help with Part 1: The Design (see page 454 in your text for what you need to include). Some members can then work on Building your Model and others can work on this brochure.

Make Your Mark

You have designed a colony on the moon to mine its resources for use on Earth. It now needs workers. Design a brochure to encourage people to come to the moon to help the run the colony.

You can use any of the layouts you want and must include pictures and text.

Remember, you are trying to get workers to move to the moon for months at a time. Your brochure needs to be visually appealing with pictures and catchy headings. Your information needs to emphasize all the benefits of working on the moon.

- how will the workers get to the moon
- how long will they be expected to work there
- how much time off will workers get

For Example: Your brochure needs to include the following ideas

- amenities on the colony
- how the colony has overcome the challenges of living on the moon
- how workers health and safety will be met

- what technology will workers be using
- what job skills and education will they need
- what working conditions can workers expect
